

# SUSFOOD DIGREE

The Digital Green Open Source Training Tool for Global Sustainability Education in the Food Industry

## What is the aim of the project?

The goal of the Susfood Digree project is to develop two international and multilingual digital training programmes to foster sustainability in the food industry among a wide range of stakeholders, helping to create a more sustainable future for this industry. The digital training contents will be used during both student and professional training courses, directly within companies and in further training institutions for adults, in order to address all management levels of the food industry.

At the end of the Project both digital training courses will be available for free in 4 languages: English, French, Spanish and German on [www.mygreentrainingbox.com](http://www.mygreentrainingbox.com)

## NEEDS

This study will be conducted in order to understand the FOOD industry's sustainable training needs, and will be focused on several target groups (VET providers, students, apprentices, job seekers, trainees, etc., professionals of the food industry, research centres, etc. and other food industry stakeholders: Technical Institutes, Public bodies, training financing organizations, etc.).

## PROCESS

The analysis of the results of this study will allow experts to create a proper training curriculum which will include pedagogical objectives, training modules and knowledge assessment processes. We expect to reach 300 participants during the study, allowing us to elaborate the curriculum and ensure that it is representative of the project target groups.

## ANALYSIS

This survey will be analysed by project partners from Spain (ASINCAR) and Germany (TECHNISCHE HOCHSCHULE OSTWESTFALEN-LIPPE) in order to devise a curriculum for two digital training courses before working with the MYTRAINING BOX (France) digital pedagogy experts to create high quality scientific and pedagogical digital training courses on the MY GREEN TRAINING BOX platform.

This project is funded by ERASMUS + under Strategic Partnerships for vocational education and training.
